

1. Snapshot			
Use case name	Property Preservation Bids (Use Case #18)	Business area	Default Management – Property Preservation
Current status	☐ Idea ☒ Prototype ☐ Pilot ☐ Ready for handoff ☐ Paused ☐ Stop		
Owners	Cenlar business owner: Darin Decker Phoenix lead: Himani Patel		
One-line purpose	Use AI to review property preservation bids, validate supporting evidence, compare costs to estimators, and provide approve/cut/deny recommendations.		
2. Business Context			
Problem to solve	Representatives manually review bids, emails, photos and cost estimators, creating inefficiencies and consistency risks.		
Target users	Property Preservation specialists and Default Management representatives	Current process	Users review bids in Decisions, locate photos/emails, compare costs to estimators, request missing info, and make approve/cut/deny decisions.
Expected value	Improved efficiency, consistency, and reduced review effort.		
3. AI Solution			
Solution overview	AI extracts bid details, validates photos, compares costs to estimators, and generates recommendations with rationale.		
Inputs	Vendor emails with work order spreadsheet and bid PDF containing cost estimation documents and property photos	Outputs	Extracted fields, cost comparisons, recommendations with rationale, and draft communications.
Human review	Representatives review AI recommendations and retain final decision authority.		
4. Experiment Results			
Work completed	Discovery, process walkthroughs, data onboarding, phase planning, architecture design, and Azure lab preparation. Some data preparation for phase 1 has been completed: email attachment extraction, spreadsheet parsing, PDF photo extraction, and framework for PDF field extraction. Due to permissions issues, we were unable to access AI models which blocked the PDF field extraction function. Remaining work to be completed outlined in the phase breakdown and technical diagram.		
Key learnings	Photo validation and cost comparison are viable; work-necessity assessment is most subjective and complex.		
Recommendation	☒ Continue ☐ More discovery ☐ Pause ☐ Stop ☐ Needs decision		

5. Assets, Access, and Technical Notes

Key links	Code Repository: phxproppresbidsapp - Microsoft Azure (Azure Function App) Docs: 18. Prop Pres Bids – houses all relevant documents and data including the phase breakdown Phase Breakdown: Prop Pres Bids Phase Breakdown.docx Use Case List: Prop Pres Bids (explanation of the use case)		
Where it lives	- phxproppresbidsapp - Microsoft Azure (Azure Function App): houses all code - phxproppresbids - Microsoft Azure (Storage Account): houses all data	Access needed	Azure Lab access, Azure AI model permissions, Cenlar + PhoenixTeam Teams Channel
Technical summary	Initial technical plan for use case <pre> graph LR Input[EML Email Work Order + PDF Attachments] --> P1_Parse[EML Parser Extract attachments -> Blob Storage] P1_Parse --> P1_Parse2[Excel file -> Excel Parser Read work order -> extract bids -> Blob Storage] P1_Parse2 --> P1_Parse3[Excel Parser Read work order -> extract bids -> Blob Storage] P1_Parse3 --> P1_Parse4[Document Intelligence Extract cost estimates for bids] P1_Parse4 --> P1_Parse5[Photo Extractor Pull embedded photos -> Blob by Bid ID] P1_Parse5 --> P1_Parse6[Package Assembler Build bid folders bids + cost estimates + photos] P1_Parse6 --> P2_Parse[Photo Analysis Phase 2: Validate photos match bid item] P2_Parse --> P3_Parse[Phase 4: Evaluate whether work outlined is necessary based on property condition evidence] P3_Parse --> P4_Parse[Bid Recommendation Phase 3: Recommend whether bid should be approved, cut, or denied based on all data points] </pre> Current State: - Green boxes: completed work - White boxes: work to be done - Red box: blocked, unable to access AI models due to permission issues		

6. Risks, Controls, and Approvals

Known risks	Decision accuracy, incomplete documentation, privacy/compliance concerns, and subjective business rules.
Guardrails/limits	AI provides recommendations only; humans make final decisions.
Review status	[X] Business [] IT [] Security [X] Legal/compliance [] Risk The business has validated the use case. Compliance has given data approval for 10 emails.

7. Operational Readiness

Future owner	Cenlar Team	Support needs	
Readiness level	Effort: [] Low [] Med [] High Complexity: [] Low [] Med [] High Priority: [] High [] Med [] Low		

8. Decisions and Next Steps

Open decisions	1. Define approval rules 2. Define feedback-loop strategy 3. Determine production path		
Open questions/blockers	Questions: Formalize work-necessity logic. Blockers: remaining platform/configuration items, unable to access AI models due to permission issues		
Next 30 days	Complete knowledge transfer and continue phased experimentation.	60-90 day path	Execute remaining phases and assess production feasibility.
9. Handoff Checklist			
Complete before closeout	[X] Owner identified [X] Assets accessible [X] Prompts documented [X] Risks captured [X] Backlog captured [X] Walkthrough held [] Final questions logged		
Most important note	The primary challenge is codifying business judgment used to determine whether requested work is necessary.
